EXPERIENCE

Grab

May 2024 – Present

Software Engineer

Ho Chi Minh City, Vietnam

- Engineered a production-ready API Gateway on Envoy Proxy, serving as the primary entry point for major public-facing traffic; **implemented** features including authentication, circuit breakers, and outlier detection; traffic observability pipeline.
- Core member of an **ongoing migration of 600+ microservices** from legacy API Gateways to a unified gateway; delivered feature parity for a subset of **20+ capabilities** - including authentication, session management, and circuit-breaker compatibility - across **3 gateway migrations**.
- Root-caused a client-side latency regression during gateway migration to a missing response-compression layer, uncovering up to **17x** larger payloads on large endpoints; drove a gzip rollout validated through production performance testing.
- Engineered a Dynamic Configuration CI/CD Pipeline with automated smoke testing and configuration validation, ensuring safe deployments without service disruption; reduced global rollout time from **60 minutes to 5 minutes**.
- Designed and implemented **traffic-shadowing** logic for critical security filters (OAuth2, JWT, Cookie), replaying live production traffic against the new gateway to validate behavioral parity; resolved mismatches to reach **99.5%+** shadow-matching accuracy.
- Architected and maintained a Disaster Recovery cluster, successfully executing **real traffic flips** to ensure business continuity during primary data center outages; built the automated CI/CD image-publishing and deployment tooling supporting it.
- Built an AI-driven Multi-Agent LLM Support Bot and a Slack-integrated release-automation assistant to automate technical troubleshooting and release preparation, cutting a manual multi-step process to under **2 minutes** and reducing resolution time for internal software release manager.

Peakee.io

Aug. 2023 – May 2024

Software Engineer

Ho Chi Minh City, Vietnam

- Architected a context-aware language learning platform that unified data from **multiple touchpoints** — mobile app, web browser, and Chromium extension — to build comprehensive learner profiles, enabling **personalized, tailored content recommendations** based on real usage patterns and personal goals.
- Developed cross-platform client (mobile, web, browser extension) from unified codebase, reducing **development overhead by 60%** while maintaining consistent user experience across all surfaces.

VinAI

June 2023 – Oct. 2023

Software Engineer Intern

Ho Chi Minh City, Vietnam

- Developed an on-premise **video streaming client** with **adaptive bitrate encoding** streaming server
- Built a full-text search engine, enabling **fast and accurate keyword-based retrieval** from millions of records.

PROJECTS

RUN | Go, Wazero, Docker | github.com/hnimtadd/run — Edge computing platform for **WebAssembly** runtime

SPACED | Go, WASM, Tailwind | github.com/hnimtadd/spaced — WASM-based serverless flashcard app with **FSRS** algorithm

TERMIO | Go, Nix | github.com/hnimtadd/termio — Terminal emulator engine with **VT100/Xterm** compatibility

EDUCATION & AWARDS

Ho Chi Minh University of Technology

Aug. 2020 – May 2024

Bachelor of Computer Science, GPA: 8.3/10.0

Ho Chi Minh City, Vietnam

TOEIC: 870

First Grab Rising Star Award

July 2025

Issued by Grab

Recognized for exceptional performance and impact
